ABOUT

This project is all about Frontend Part i.e a Demo Project in which I have created a website of a online grocery market which shows the varieties of different foods and vegetables used in our day-to-day lives for which if we want to buy and take a delivery of the particular product.

In this project I have made a small, simple project which every fresher can create. This is my second internship project at Skill-Lync. I got a lot of guidance and proper explanation from my mentors during the project making and the further contents are explained below.

Getting Started

Built Using

- Sublime Text

ABOUT SUBLIME TEXT

- Sublime Text is a shareware text and source code editor available for Windows, macOS, and Linux. It natively supports many programming languages and markup languages. Users can customize it with themes and expand its functionality with plugins, typically community-built and maintained under free-software licenses. To facilitate plugins, Sublime Text features a Python API. The editor utilizes minimal interface and contains features for programmers including configurable syntax highlighting, code folding, search-and-replace supporting regular-expressions, terminal output window, and more. It is proprietary software, but a free evaluation version is available.

HTML

- The HyperText Markup Language or HTML is the standard markup language for documents designed to be displayed in a web browser. It is often assisted by technologies such as Cascading Style Sheets (CSS) and scripting languages such as JavaScript.
- HTML elements are the building blocks of HTML pages. With HTML constructs, images and other objects such as interactive forms may be embedded into the rendered page. HTML provides a means to create structured documents by denoting structural semantics for text such as headings, paragraphs, lists, links, quotes, and other items. HTML elements are delineated by tags, written using angle brackets. Tags such as `` and `<input />` directly introduce content into the page. Other tags such as `<p>` and `</p>` surround and provide information about document text and may include sub-element tags. Browsers do not display the HTML tags but use them to interpret the content of the page.

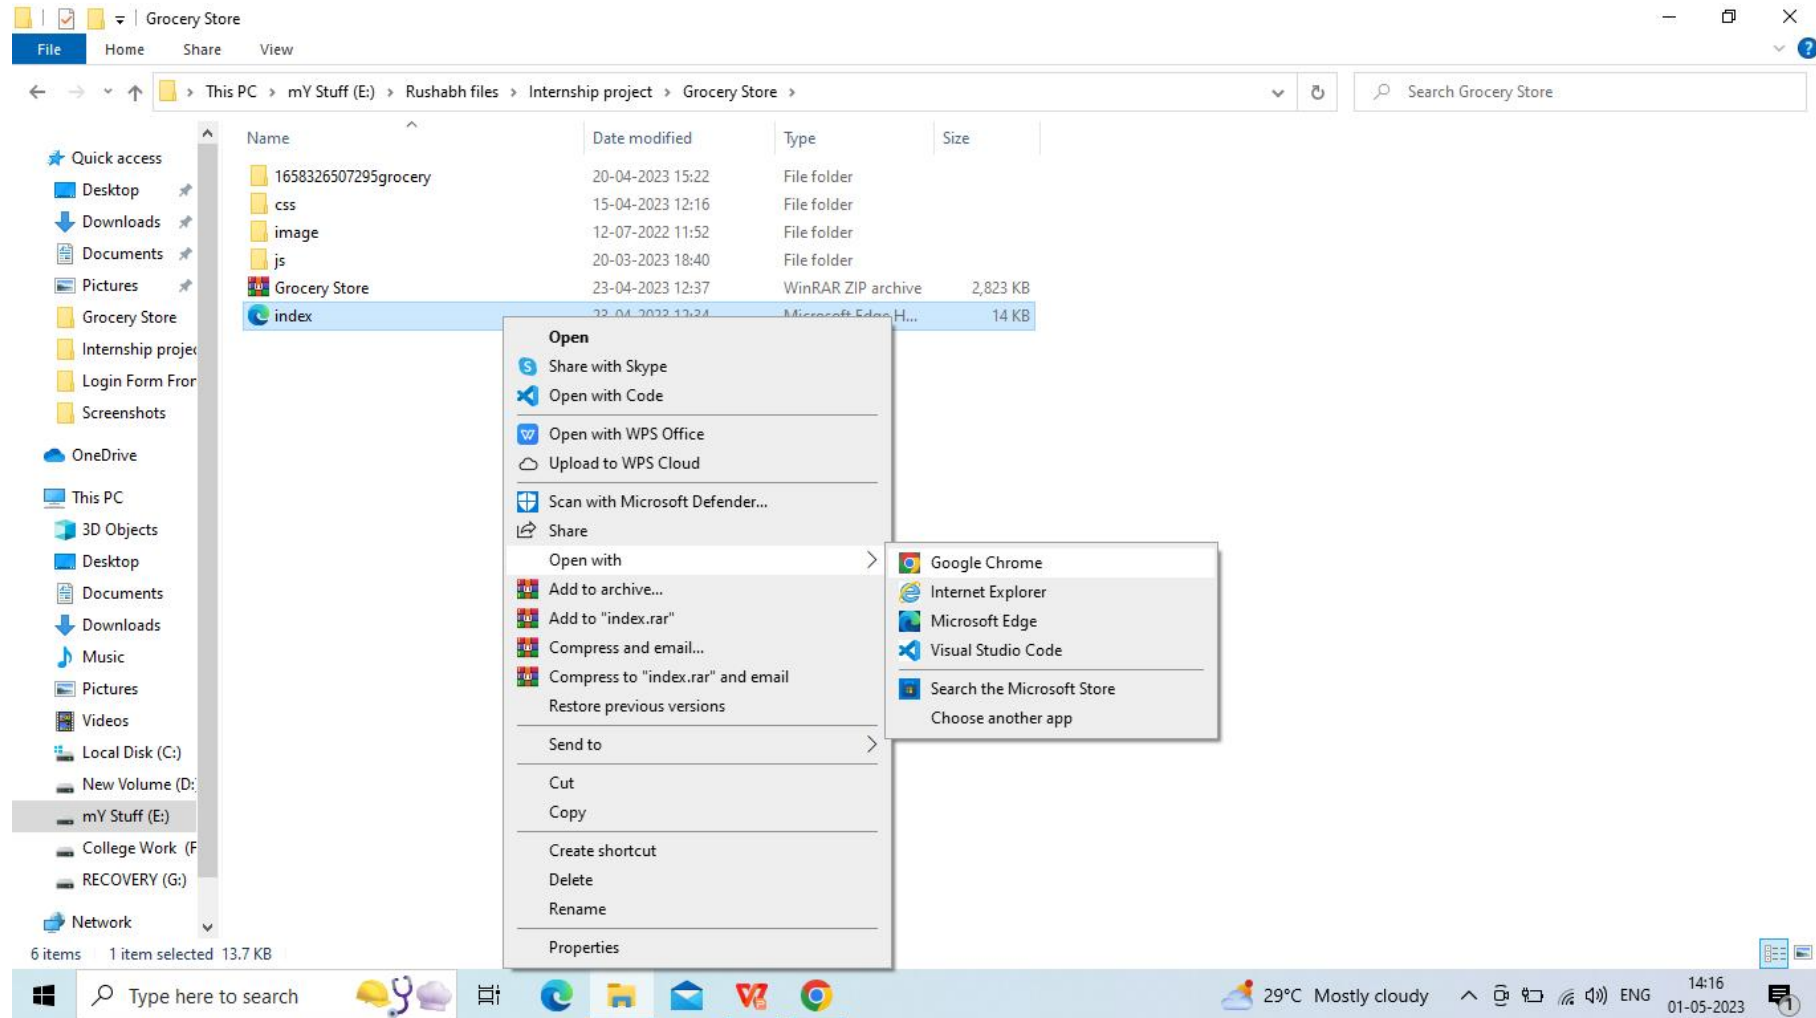

JS(JAVASCRIPT)

- JavaScript often abbreviated as JS, is a programming language that is one of the core technologies of the World Wide Web, alongside HTML and CSS. As of 2022, 98% of websites use JavaScript on the client side for webpage behavior, often incorporating third-party libraries. All major web browsers have a dedicated JavaScript engine to execute the code on users' devices.
- JavaScript is a high-level, often just-in-time compiled language that conforms to the ECMAScript standard.[10] It has dynamic typing, prototype-based object-orientation, and first-class functions. It is multi-paradigm, supporting event-driven, functional, and imperative programming styles. It has application programming interfaces (APIs) for working with text, dates, regular expressions, standard data structures, and the Document Object Model (DOM).

CSS (CASCADING STYLE SHEETS)

- Cascading Style Sheets (CSS) is a style sheet language used for describing the presentation of a document written in a markup language such as HTML or XML (including XML dialects such as SVG, MathML or XHTML). CSS is a cornerstone technology of the World Wide Web, alongside HTML and JavaScript.
- CSS is designed to enable the separation of content and presentation, including layout, colors, and fonts.[3] This separation can improve content accessibility; provide more flexibility and control in the specification of presentation characteristics; enable multiple web pages to share formatting by specifying the relevant CSS in a separate .css file, which reduces complexity and repetition in the structural content; and enable the .css file to be cached to improve the page load speed between the pages that share the file and its formatting.

Running the tests

USAGE

- SYSTEM REQUIREMENTS

- ❖ **Processor (CPU)** - Minimum: 2.7 GHz 64-bit dual-core processor
Recommended: 2.7 GHz 64-bit quad-core processor

- ❖ **RAM** - 8 Gigabytes

- ❖ **Hard Disk** - 3 Gigabytes

- ❖ **Display** - Minimum: 1280 x 1024 24-bit Recommended: 1600 x 1200 True Color
32-bit
